

Frontend Decisions

#	Decision	Choice	Why
1	Framework	React + Vite	No SEO/deploy need, backend exists already, avoids SSR/RTL hydration risk
2	Language	TypeScript	Type-safe API contracts
3	Routing	React Router	Standard for Vite SPA, supports <code>/en</code> <code>/ar</code> prefixes
4	Build tool	Vite	Fast dev/HMR
5	Styling	TailwindCSS	Fast mobile-first styling, native RTL logical properties
6	RTL strategy	Logical properties (<code>ms-</code> , <code>me-</code> , <code>ps-</code> , <code>pe-</code>)	One class works both directions
7	i18n library	react-i18next	Mature, well-documented
8	Numerals (currency)	Western digits	Matches bank's existing Arabic UI
9	Number/date formatting	<code>Intl.NumberFormat</code> / <code>Intl.DateTimeFormat</code>	Locale-correct, zero dependency
10	Translation content	JSON per locale, human-reviewed	Financial terms too risky for machine translation
11	Component base	daisyUI	Plugin-based; zero-boilerplate semantic Tailwind classes (card, btn).
12	Chat structured output	Tool UI (on top of shadcn)	Ready-made chat runtime/streaming with isolated structured output rendering.
13	Design direction	Bank's color palette, standalone layout/components	bank colors on a clean, modern base for trust + speed
14	Server state	TanStack Query	Caching/retry for upload polling, plan fetch, chat
15	UI state	Zustand	Minimal boilerplate for the little global state needed
16	Forms	React Hook Form + Zod	Efficient re-renders, one schema for validation + types

#	Decision	Choice	Why
19	Accessibility	WCAG 2.1 AA, manual check	Realistic bar, manual catches more than automated-only
20	RTL QA	EN + AR screenshot required per UI PR	Cheap gate, catches most RTL bugs
21	Sensitive data display	Masked by default, explicit reveal	Standard banking UX, cheap to build
22	Package manager	pnpm	Fast installs
23	Lint/format	ESLint + Prettier + Husky	No formatting noise in review
24	CI	Lint + typecheck + unit tests per PR	Minimum safety net
25	Icons	Lucide	broad financial/utility icon coverage, easy to link with React, only used icons ship to the bundle
